FileZen
Simple, secure
file transfer appliance

FileZen helps businesses overcome problems of sharing data between employees and customers. The dedicated secure appliance allows your business to retain complete control of your data, and solves problems with transferring large files quickly and easily.

"FileZen allows your business to share data according to your needs, overcoming problems with file size limits, content filters and potential loss."

Your data
shared wherever and whenever you choose

- ✔ Avoid email attachment size limitations.
- ✔ Prevent data being sent to the wrong recipient.
- ✔ All shared data is kept in-house, under your control.
- ✔ Auditing tools allow you to monitor the data being shared, and by whom.
- ✔ Avoid data loss problems caused by insecure, easily lost removable media.

Simple, web-based management

- ✔ FileZen allows you to share a single file, or a complete folder according to your specific requirements.
- ✔ Every function can be accessed via a simple Web GUI, allowing fast, easy sharing of data.
- ✔ Integrate with external user management systems for additional security control.

The simple point-and-click web interface allows authorised users to send and receive files quickly and easily. This simplicity is key to increasing productivity and protecting your data from loss or mismanagement.

## Total visibility for added security

- ✔ Full audit capabilities allow you to monitor data being shared and the people involved.
- ✔ Fine control of shared file access ensures only authorised parties can access your data.
- ✔ Support for external authentication systems adds a further layer of security.
- ✔ Define file retention periods to limit access.

By avoiding traditional transfer methods like email and USB drives, FileZen ensures nothing is lost, mislaid, stolen or accessed without the correct permissions.

Flexible deployment options

- FileZenMail function emails secure links to securely stored files, avoiding file size limitations and content filtering restrictions.
- Build Project sharing folders that control access and management permissions for your users.

FileZen provides a secure file repository, simplifying data sharing between you and your customers, or project team members, without opening the rest of your network to the Internet.
